

Questions:

1. What were two unexpected uses of social networking?
2. What does the term ubiquitous computing mean? Look it up using a search engine. Write a paragraph explaining the meaning.
3. How will we react when we can go into a hospital for surgery performed entirely by a machine?
4. How will we react when chips implanted in our brains enhance our memory with gigabytes of data and a search engine? Will we still be human?
5. Write a short essay (roughly 300 words) about some topic related to computing technology or the Internet that interests you and has social or ethical implications. Describe the background, then identify the social and/or ethical issues, problems or questions that you think are important. Structure the essay into paragraphs, including an introduction, paragraphs for the main points and finish with a conclusion.
